

PROBABILITY

HARI VENKATESWARLU - FWC22058

- 13.1.11** ¹ Two groups are competing for the position on the Board of directors of a corporation. The probabilities that the first and the second groups will win are 0.6 and 0.4 respectively. Further, if the first group wins, the probability of introducing a new product is 0.7 and the corresponding probability is 0.3 if the second group wins. Find the probability that the new product introduced was by the second group

Solution:

RV	Values	Description
X	$\{1,2\}$	1:Group1 ,2:Group2
Y	$\{0,1\}$	0:New product not introduced ,1:New product introduced

Table 2: Random variables(RV) X,Y

Event	Probability	Description
$\Pr(X = 1)$	0.6	First group winning
$\Pr(X = 2)$	0.4	Second group winning
$\Pr(Y = 1 X = 1)$	0.7	Introducing 1 if 1 wins
$\Pr(Y = 1 X = 2)$	0.3	Introducing 1 if 2 wins

Table 4: Probabilities

$$\Pr(X = 2 | Y = 1) = \frac{\Pr(2) \Pr(1 | 2)}{\Pr(1) \Pr(1 | 1) + \Pr(2) \Pr(1 | 2)} \quad (13.1.11.1)$$

$$= \frac{(0.4)(0.3)}{(0.6)(0.7) + 0.4(0.3)} \quad (13.1.11.2)$$

$$= \frac{2}{9} \quad (13.1.11.3)$$
