PROBABILITY

HARI VENKATESWARLU - FWC22058

13.1.11 1 A fair die is rolled. Consider events E=1,3,5 F=2,3 and G=2,3,4,5. Find

- (a) $Pr(E \mid F)$ and $Pr(F \mid E)$
- **(b)** $Pr(E \mid G)$ and $Pr(G \mid E)$
- (c) $Pr(E \cup F \mid G)$ and $Pr(E \cap F \mid G)$

Solution:

Event	Probability
P(E)	$\frac{1}{2}$
P(F)	$\frac{1}{3}$
P(G)	$\frac{2}{3}$
P(EF)	$\frac{1}{6}$
P(EG)	$\frac{1}{3}$
P(FG)	$\frac{1}{3}$
P(EFG)	$\frac{1}{6}$

Table 2:

(a) $Pr(E \mid F)$ and $Pr(F \mid E)$

$$\Pr\left(E \mid F\right) = \frac{\Pr\left(EF\right)}{\Pr\left(F\right)} \tag{13.1.3.1}$$

$$\Pr(E \mid F) = \frac{\Pr(EF)}{\Pr(F)}$$

$$\Rightarrow \Pr(E \mid F) = \frac{\frac{1}{6}}{\frac{1}{3}}$$

$$\Rightarrow \Pr(E \mid F) = \frac{1}{2}$$

$$\Pr(F \mid E) = \frac{\Pr(FE)}{\Pr(E)}$$

$$\Rightarrow \Pr(F \mid E) = \frac{\frac{1}{6}}{\frac{1}{2}}$$

$$\Rightarrow \Pr(F \mid E) = \frac{1}{6}$$

$$\Rightarrow \Pr(F \mid E) = \frac{1}{3}$$

$$(13.1.3.1)$$

$$(13.1.3.2)$$

$$(13.1.3.3)$$

$$(13.1.3.4)$$

$$(13.1.3.5)$$

$$\implies \Pr\left(E \mid F\right) = \frac{1}{2} \tag{13.1.3.3}$$

$$\Pr(F \mid E) = \frac{\Pr(FE)}{\Pr(E)} \tag{13.1.3.4}$$

$$\implies \Pr(F \mid E) = \frac{\frac{1}{6}}{\underline{1}} \tag{13.1.3.5}$$

$$\implies \Pr(F \mid E) = \frac{1}{3} \tag{13.1.3.6}$$

¹Read question numbers as (CHAPTER NUMBER).(EXERCISE NUMBER).(QUESTION NUMBER)

(b) $Pr(E \mid G)$ and $Pr(G \mid E)$

$$\Pr\left(E \mid G\right) = \frac{\Pr\left(EG\right)}{\Pr\left(G\right)} \tag{13.1.3.7}$$

$$\implies \Pr\left(E \mid G\right) = \frac{\frac{1}{3}}{\frac{2}{3}} \tag{13.1.3.8}$$

$$\implies \Pr\left(E \mid G\right) = \frac{1}{2} \tag{13.1.3.9}$$

$$\Pr(G \mid E) = \frac{\Pr(GE)}{\Pr(G)}$$
(13.1.3.10)

$$\Longrightarrow \Pr\left(G \mid E\right) = \frac{\frac{1}{3}}{\frac{1}{2}} \tag{13.1.3.11}$$

$$\implies \Pr(G \mid E) = \frac{2}{3} \tag{13.1.3.12}$$

(c) $Pr(E \cup F \mid G)$ and $Pr(E \cap F \mid G)$

$$\Pr\left(E + F \mid G\right) = \frac{\Pr\left((E + F)G\right)}{\Pr\left(G\right)} \tag{13.1.3.13}$$

$$\implies \Pr(E + F \mid G) = \frac{\Pr(EG + FG)}{\Pr(G)}$$
(13.1.3.14)

$$\implies \Pr(E + F \mid G) = \frac{\Pr(EG) + \Pr(FG) - \Pr(EFG)}{\Pr(G)}$$
(13.1.3.15)

$$\implies \Pr\left(E + F \mid G\right) = \frac{3}{4} \tag{13.1.3.16}$$

$$\Pr\left(EF \mid G\right) = \frac{\Pr\left(EFG\right)}{\Pr\left(G\right)} \tag{13.1.3.17}$$

$$\implies \Pr\left(EF \mid G\right) = \frac{1}{4} \tag{13.1.3.18}$$
